

Sustainable Development on Martha's Vineyard

Sustainable Vineyard

-  Ecotourism
-  Wind Turbine
-  Cultural Site
-  Farm
-  Shopping
-  Solar

The Martha's Vineyard Youth Leadership Initiative (MVYLI) has been developing this map for several years. The map has evolved from a two-dimensional design to an online three-dimensional design.

Purpose: To map sustainable locations on the island of Martha's Vineyard that promote and improve the natural environment as well as culturally sustainable locations that promote the longstanding traditions of Martha's Vineyard as well as "Vineyard way of life." The map will be available online so it can reach a greater amount of people and this online availability will promote ecotourism on Martha's Vineyard.

Process: MVYLI youth determined sites based off of their sustainable tour of the Vineyard during the summit as well as sites that were located on the previous version of the Sustainable Vineyard Map. The map was created by MVYLI youth using Google Earth with the help of Chris Seidel from the MV Commission.

Disclaimer:
Data provided are for planning purposes only. The MVYLI cannot be responsible for how these data are used or interpreted by the end user. Producers of this map recognize that omissions of data exist on this map and the intent was not to produce the entire inventory of sustainable projects on MV but to merely highlight some of the more notable sustainable projects/sites of MV.
